

Secure Business

PLAN.B

Cybersecurity as a Service.

Protect your organisation, data and people with 24/7, world-leading ransomware and breach prevention services combined with local, hands-on support. Allow your people to focus on what they do best while global cybersecurity experts keep you safe.

A Security Team that **Never Sleeps.**

A team of global cybersecurity experts monitors your environment 24/7 and takes action immediately when needed.

A Single Pane of Glass.

A unified interface that consolidates the monitoring and control of all your security systems for ultimate visibility.

Global Expertise. **Local Support.**

We combine global cybersecurity services and expertise with local knowledge and support to deliver solutions suited to global and local threats.

Reduce the risks and costs associated with security incidents and data breaches.

As cybersecurity becomes increasingly complex and threats become more sophisticated, finding, hiring, developing, and paying people with the skills and expertise needed to protect your organisation is a huge challenge.

When you're up against well-funded and resourced bad actors, it's nearly impossible for small, in-house cybersecurity teams to get the job done on their own.

At the same time, the risks and costs associated with security incidents and breaches are higher than ever, meaning you simply cannot afford to leave your organisation exposed.

Our Cybersecurity as a Service offering is a Managed Detection and Response (MDR) solution designed to deliver the expert, 24/7 protection you need at a fraction of the cost of an in-house team that could provide the same level of security.

Why you need the Plan B Cybersecurity service:

- Stop ransomware and other advanced attacks with a 24/7 team of threat response experts
- Maximise the ROI of your existing cybersecurity technologies
- Let us execute full-scale incident response, work with you to manage security incidents, or deliver detailed threat notifications and guidance
- Improve cyber insurance coverage eligibility with 24/7 monitoring and endpoint detection and response (EDR) capabilities
- Free up your internal IT and security staff to focus on business enablement

Superior security outcomes delivered as a service.

🛡️ Instant Security Operations Centre (SOC)

🕒 24/7 threat detection and response

🔍 Expert-led threat hunting

🚑 Full-scale incident response capabilities

🛡️ Superior cybersecurity outcomes

Powered by Sophos – The Most Trusted and Highest Rated MDR Service.

At Plan B, we believe in partnering with the most trusted and experienced global providers to offer our customers the best solutions available. When it comes to cybersecurity, that partner is Sophos.

Insights

Sophos is a worldwide leader and innovator of advanced cybersecurity solutions, including Managed Detection and Response (MDR) and incident response services and a broad portfolio of endpoint, network, email, and cloud security technologies that help organisations defeat cyberattacks.

As one of the largest pure-play cybersecurity providers, Sophos defends more than 500,000 organisations and more than 100 million users globally from active adversaries, ransomware, phishing, malware, and more.

The Plan B cybersecurity solution leverages the global expertise and experience provided by Sophos and combines it with local support and knowledge to ensure you are protected from international and regional threats, with support easily accessible whenever you need it.

Always-On Cybersecurity You Can Trust.

The Plan B cybersecurity solution is a fully managed 24/7 service delivered by experts who detect and respond to cyberattacks targeting your computers, servers, networks, cloud workloads, email accounts, and more.

24/7 Threat Monitoring and Response

We detect and respond to threats before they can compromise your data or cause downtime. Seven global security operations centres (SOCs) provide around-the-clock coverage.

Compatible with Your Existing Security Tools

Our cybersecurity solution can integrate telemetry from third-party endpoints, firewalls, networks, identity, email, backup and recovery, and other technologies, meaning you can leverage your existing investments to the fullest.

Full-Scale Incident Response

When we identify an active threat, our team can execute an extensive set of response actions on your behalf to remotely disrupt, contain and fully-eliminate the adversary. With a Complete license, you benefit from unlimited full-scale incident response, with no caps or extra fees.

Expert-Led Threat Hunting

Proactive threat hunts performed by highly-trained analysts uncover and rapidly eliminate more threats than security products can detect on their own. Our team can also use third-party vendor telemetry to conduct threat hunts and identify attacker behaviours that evaded detection from deployed toolsets.

Adaptive Cybersecurity Ecosystem

The Sophos ACE automatically prevents malicious activity and enables us to search for weak signals for threats that require human intervention to detect, investigate, and eliminate.

Weekly and Monthly Reporting

Get access to a single dashboard for real-time alerts, reporting, and management. Weekly and monthly reports provide insights into security investigations, cyberthreats, and your security posture.

Direct Call-in Support

Your team has direct call-in access to our Security Operations Centre (SOC) to review potential threats and active incidents. Our operations team is available 24/7/365 and backed by support teams across 26 locations worldwide.

Root Cause Analysis

Along with providing proactive recommendations to improve your security posture, we perform root cause analysis to identify the underlying issues that led to an incident. We give you prescriptive guidance to address security weaknesses so they cannot be exploited in the future.

Threat Containment

For organisations that choose to manage incident responses themselves, our team can execute threat containment actions, interrupting the threat and preventing spread. This reduces the workload for internal security operations teams and enables them to rapidly execute remediation actions.

Dedicated Incident Response Lead

We provide you with a Dedicated Incident Response Lead who collaborates with your internal team and external partner(s) as soon as we identify an incident and works with you until the incident is resolved.

Breach Protection Warranty

Included with all Complete annual (one to five years) and monthly licenses, the warranty covers up to \$1 million in response expenses. There are no warranty tiers, minimum contract terms, or additional purchase requirements.

Intelligence Briefings: “Sophos MDR ThreatCast”

Delivered by the Sophos MDR operations team, the “Sophos MDR ThreatCast” is a monthly briefing available exclusively to customers. It provides insights into the latest threat intelligence and security best practices.

Account Health Check

We continuously review settings and configurations for endpoints and make sure they are running at peak levels.

About **Plan.B**

Plan B leverages over 25 years of industry experience, bringing together a powerhouse of Network, Data Centre, Cloud Hosted and Business Continuity services.

We provide NZ-hosted and supported business continuity, cloud infrastructure, networking and cybersecurity solutions to organisations around New Zealand, including many of the most recognised global and local brands. We implement customised and scalable solutions with industry best practices tailored to your requirements.
